DataDocks Solutions

- Self-service solution for customers and carriers to book appointments
- Last month's support ticket response time was under 10 minutes.
- View KPI's and logistics information through a modern and easy to use interface
- More information about the loads, therefore when drivers show up it will be easier to find the correct load information
- DataDocks will spread out the loads throughout the day, lowering the stress and improving flow for the operations team.
- Quicker turn around times
- 67% time saved – DataDocks 2021 survey found on average coordinators saved 67% of their day using the platform
- DataDocks will not only provide onboarding and training, but also after the go live date will schedule follow up meetings every quarter to review how Westlake is doing. Think of DataDocks as a consultant in your back pocket
- DataDocks features – we listen to our customers and develop features based on their needs. Last year, 82.61% of all features developed were requested by our customers
- Can continue to grow and scale along with Westlake even if their business rules change

Desired Outcome

Westlake is looking to help improve the flow of traffic and make the operations more effective.

Utilizing DataDocks will lower the need for phone calls and emails back and forth to vendors/ customers/carriers and increase throughput.

Security

Security is a top priority for the DataDocks team.

This software is hosted in geo-redundant global data centers that offer fully redundant server infrastructure, hardened storage, application monitoring, fault management and DDOS protection from malicious parties.

These Data Centers are rated SOC 1 Type II, SOC 2 Type II and ISO/IEC 27001:2013.
